                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 17915, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
FAPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-07-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
Sequence 4, Application US/09214564A

Patent No. 6150515

GENERAL INFORMATION:
THEORY Sharp, Phillip A.
APPLICANT: Sharp, Phillip A.
TITLE OF INVENTION: TAT-SF: Cofactor For Stimulation Of Transcriptional
TITLE OF INVENTION: Elongation By HIV-1 TAT
TITLE OF INVENTION: Blongation By HIV-1 TAT
TITLE OF INVENTION: Mo656/7042
CURRENT APPLICATION NUMBER: US/09/214,564A
CURRENT FILING DATE: 1999-08-18
PRIOR PRING DATE: 1996-07-03
PRIOR PLING DATE: 1996-12-13
PRIOR PPLICATION NUMBER: PCT/US97/11713
PRIOR FILING DATE: 1996-12-13

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                   The present sequence represents the 5'-terminal region of the barley D-hordein gene. The present invention describes gene expression regulatory DNA which comprises a promoter region derived from the barley (Hordeum vulgare) D-hordein gene which allows expression of a desired structural gene, and a regulatory region regulating such expression. The introduction into plants of expression cassettes containing the gene expression into plants of expression cassettes containing the gene expression into plants of expression of a gene within a plant cell expression vectors) enables the expression of a gene within a plant cell ergions in the regulatory DNA allows control of expression by e.g. tissue type or developmental stage, whilst the use of only an activating regions in the regulatory DNA allows control of expression by e.g. tissue type or developmental stage, whilst the use of only an activating region maintains expression at a high level, providing an effective production means when recovery of the product of the structural gene is desired. The expression cassette/vector may be introduced into e.g. maturing seed andosperm tissue or regeneratable plant calls (e.g. derived from anthers) to improve seeds of barley or other plants, to produce gene products in seeds or to contribute to plant breeding programmes. The expression regulatory DNA can also used in expression systems in vitro. GUS activity in barley protoplasts transfected with plasmid to be paraged.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CAACAGCTG--------GTTGGCCAGCTGCCATGGAGCACGCGGG 246

The barley is transformed with a polynucleotide sequence which regulated the formation of D-hordein. Transformation results in the production of barley strains with improved malting properties such as wort filterability and efficiency of extraction. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                651

```
This invention relates to barley having a low gel protein content. The barley is transformed with a polynucleotide sequence which regulated the formation of D-hordein. Transformation results in the production of barley strains with improved malting properties such as wort filterability and efficiency of extraction. The present sequence represents cDNA involved in the regulation of D-hordein production.
                                    Transformation of barley with a D-hordein expression production of barley with lowered gel protein content

                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of the coding region of a newly identified allele, designated lAxZasteriskB, of the lAxZasterisk HWM glutenin subunit gene, found in certain lines of wheat variety Bankuti 1201. The variant differs from the lAxZasterisk gene by a single point mutation of C to G at nucleotide position 1181. This results in a change from Ser to Cys at amino acid position 394. Because of this, the newly identified allele provides enhanced possibilities for the formation of disulfide bridges compared with the known allele, and this could at least partly explain the good technological properties of the variety. The newly identified gene can be used to develop transgenic wheat varieties with better quality gluten.
                                                                          Wheat; glutenin; storage protein; variant; transgenic plant;

                                                                                                                                                                                                                                                                                                                             This nucleotide sequence is of the synthetic HWM-glutenin construct which is introduced into the DNA of the cereal to form a non-natural repetitive domain which changes the viscoelastic property of a dough. The domain comprises HWW glutenin subunit repeats which are synthetic in sequence or non-natural in number. The dough is useful for making a wheat flour, wheat dough, bread or noodle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              165 -----GlyGlyGlyProArglleGlyArgValArgLeuThrLygAlaArgGluTyrAla

Where a primer set comprises: (a) an Oligo-dr primer and an Oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an Oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences genomic DNA sequences (ABL16176-ABL30511), expressed DNA (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ------GGTGGCCCAGCTGCCCGGTTTCGGAGTTATCAATGGACTGAT 1191

```
polynucleotide which comprises a 3'-end sequence, where the obligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and particularly full-length conva. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH30166 to AAH13628 and AAH13633 to AAH13612 represent human anino acid sequences; and AAH3362 to AAH13632 represent coligonal colides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                  the present invention.

WPI; 2002-426119/45.

Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes in liver tissue sample

Claim 1; SEQ ID NO 2353; 298pp; English.

progression of liver cancer, here accellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO The invention relates to a novel method for diagnosing and detecting the at ftp.wipo.int/pub/published\_pct\_sequences

The invention relates to human immunodeficiency virus immunogens and their corresponding DNA molecules. An immunogen comprises a portion of aga protein of HIV from an HIV clade, parts of p17 and p24, modified to prevent N-terminal myristoylation; and a synthetic polypeptide comprising human cytotoxic T-lymphocyte (CTL) epitopes of HIV protein. This municipan is designed to elicit an HIV-pepcific immunogen. This comprises of HIV protein. This communogen is useful in the preparation of a medicament such as vaccine to prevent or treat HIV infection in a human subject.

The invention also relates to method of stimulating anti-HIV immune response in a human subject which comprises administering one or more times an amount of nucleic acid molecule sufficient to prime an immune response to the immunogen, or else may be packaged within a delivery means, such as a modified vaccinia wirus Ankara (WAA) to boost the immunocer cesponse to common portion of the immunogen. The HIV A immunogen consists of about 73 of gag protein fused to a string of 25 partially consists of about 73 of gag protein fused to a string of 25 partially coverlapping human CTL epitopes. The gag domain of HIV A contains p24 and p17 in an order reverse to the viral gag p17-p24-p15 polyprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2078
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2027

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the genomic DNA region from Thermus thermophilus which contains the coding regions for the L-lysine biosynthetic protein homoaconitase hydratase subunits I and II. The gene can be used for the generation an L-lysine-producing Thermus thermophilus strain for the production of L-lysine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            130

Also described is a method for preparing the proteins using recombination techniques. The human proteins from the present invention, and nucleotide sequences encoding them, can be used for treating diseases such as cancer.

```

Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. Barash SC, Ruben SM; (HUMA-) HUMAN GENOME SCI INC. WPI; 2001-451937/48. diagnosis -Rosen CA, 

Example 2; SEQ ID NO 2718; 781pp + Sequence Listing; English.

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB03109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment c and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointesfinal tract, liver, lung, or urogenital; (b) immune c discorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.
